Newly Post graduated software development project experience. Focused, results-driven and knowledgeable in multiple programming languages , frameworks and tools . Seeking an opportunity to enhance various software packages.

Projects

- **Personal Website or Portfolio:**
  - A personal portfolio website is a web application that showcases an individual's work, skills, accomplishments, and experiences. It serves as a hub for presenting a person's professional identity to the online world.
  - In this web application ,I used HTML5,CSS3 & Basic Javascript & also some sort of Media Query to make it a responsive.
- **Simon Says (Web Game) :**
  - Simon games challenge memory retention capacity by generating a sequence of colors for a player to repeat. After each successful series of presses, "Simon" repeats the list followed by an additional random color. Game play continues until the player makes a mistake. In this game I used HTML5, CSS3 and Javascript.This game is fully responsive .
- **Amazon clone (Frontend)**

  Amazon Clone is a web application developed using React and Firebase technologies. It is a project that replicates the core functionalities of Amazon.com, such as product browsing, searching, adding to cart, and checkout with a great UI experience

Skills
